

MANOJ P.

FULL STACK DEVELOPER | AI ENGINEERING (PROJECT-BASED)

London, UK | +44 7818 933697 | manojpalanisamy46@gmail.com

PROFESSIONAL SUMMARY

Full Stack Developer with 2+ years' experience building responsive web and cloud applications using React.js, JavaScript, PHP, Node.js and AWS, including commercial delivery at Maverick Technologies. Hands-on, project-based AI engineering experience gained through self-directed development of LLM-powered chat, retrieval-augmented generation (RAG), AI resume generation and workflow automation prototypes. Skilled in REST APIs, prompt engineering, embeddings, vector search, asynchronous programming, debugging and cloud deployment.

TECHNICAL SKILLS

AI Engineering - Personal Projects: Generative AI, LLM API Integration, Prompt Engineering, Retrieval-Augmented Generation (RAG), Embeddings, Vector Databases, Semantic Search, Context Management, Structured JSON Outputs, Document Question Answering, AI Workflow Automation

Programming: JavaScript (ES6+), Python, PHP, HTML5, CSS3

Frontend: React.js, Redux, Bootstrap, Responsive Web Design, DOM Manipulation, jQuery, Chart.js

Backend & APIs: Node.js, Express.js (Basic), REST APIs, Fetch API, Asynchronous Programming, CRUD Operations, JSON, API Error Handling

Databases & Cloud: MySQL, MongoDB, AWS

Tools & Practices: Git, GitHub, Postman, VS Code, OOP, Modular JavaScript, Agile, Testing, Debugging, Performance Optimisation

PROFESSIONAL EXPERIENCE

Front End & Full Stack Web Developer - Maverick Technologies

Jan 2025 - Present

- Developed and maintained 4 production websites using React.js, JavaScript and PHP, supporting 500-1,000 users with reliable, responsive experiences.
- Built reusable React.js and Bootstrap components through modular development practices, reducing development effort and improving maintainability.
- Collaborated with designers, copywriters and QA teams across 8-10 Agile sprints, delivering client requirements and resolving 40+ production issues.
- Integrated WordPress customisations and third-party APIs into CMS-driven websites, improving content management efficiency and application functionality.
- Improved front-end performance by 25-30% through lazy loading and rendering optimisation, reducing page load times and improving responsiveness.

Full Stack Development Trainee - GUVI (IIT-M Incubated)

2023 - 2024 | Structured training and project-based experience

- Developed 6+ full-stack web applications using HTML5, CSS3, JavaScript, PHP and REST APIs through structured, project-based training.
- Built 15+ responsive user interfaces and backend modules, strengthening end-to-end development and usability skills.
- Deployed cloud-hosted applications on AWS and practised scalable deployment workflows through hands-on implementation projects.
- Performed cross-browser testing and debugging and collaborated in Agile teams to deliver 5+ development assignments.

PROFESSIONAL DEVELOPMENT

AI Engineering & Full-Stack Development - Self-Directed

2026 - Present | Independent learning and personal projects (non-commercial)

- Pursuing structured, project-led learning in generative AI, LLM application development, full-stack JavaScript, API integration and cloud deployment.
- Built personal prototypes that connect React/JavaScript interfaces to LLM and REST APIs through Node.js and Python services, with asynchronous handling, validation and error states.
- Implemented RAG workflows covering document ingestion, text chunking, embedding generation, vector storage, semantic retrieval and context-grounded response generation.
- Designed and tested prompts for chat, document question answering, summarisation, resume content generation and structured extraction; used Git/GitHub and Postman for iterative testing.

PERSONAL AI PROJECTS

AI Chat Application - Personal Prototype

React, JavaScript, Node.js, REST APIs, LLM API

- Developed a responsive full-stack chat interface with a backend LLM integration, multi-turn history, reusable prompt templates, asynchronous requests, loading and error states, and structured response rendering.

RAG Document Question-Answering Assistant - Personal Prototype

Python, LLM API, Embeddings, Vector Database, RAG

- Built a document ingestion, chunking, embedding and vector-storage pipeline that retrieves semantically relevant passages and grounds LLM answers in supporting text.

AI Resume Builder - Personal Prototype

React, Node.js, LLM API, Prompt Engineering, JSON

- Developed an AI-assisted workflow that combines CV information and a target job description to draft ATS-aligned content using structured prompts and JSON responses, with user review before finalisation.

AI Workflow Automation Toolkit - Personal Prototype

Python, JavaScript, REST APIs, LLM API

- Created reusable API-driven workflows for summarisation, classification, extraction and text transformation, with validation, retry logic and error handling.

SELECTED FULL-STACK PROJECTS

Micro-SaaS Task Manager

React.js, Node.js, PHP, JWT, AWS

- Developed a real-time task management platform with role-based dashboards, responsive workflows, JWT authentication and AWS deployment for scalable team collaboration.

Multi-Vendor Marketplace

React.js, Bootstrap, PHP, Stripe

- Built buyer and seller portals with secure payments, product listings and inventory management; API optimisation reduced response latency by 25%.

Expense Tracker with Analytics Dashboard

React.js, Redux, Chart.js

- Created a responsive expense dashboard with centralised state management, interactive reports and dynamic visualisations of spending patterns.

Online Examination Platform

React.js, PHP, MySQL, AWS

- Developed quiz, administration and analytics workflows with automated results and scalable architecture designed to support approximately 100 concurrent users.

EDUCATION

MSc Management with Project Management - BPP University

2024

- Developed expertise in project delivery, stakeholder management, business strategy and technology project execution.

Bachelor of Computer Applications - K.S. Rangasamy College of Arts and Science

2022

- Built strong foundations in software development, databases, programming and application design.

COURSES & CERTIFICATIONS

Full Stack Development Program - GUVI (IIT-M Incubated)

- HTML5, CSS3, JavaScript, PHP, MySQL, REST APIs, Git, Agile delivery and AWS deployment.
